

PHP YII

Yii is a PHP web framework that can be used to build web applications.

Yii::app() method

Yii

Yii::app() method returns a CWebApplication object. This object is used to manage the application's state and to provide access to the application's components.

```
name defaultController  
array(  
    'name' => 'Yii Framework',  
    'defaultController' => 'site',  
)
```

```
return array(...);
```

```
Yii::createWebApplication()  
$app = Yii::createWebApplication($configFile);
```

```
include()  
PHP
```
