

# LOGISTICS TRANSLATION AT CCJK

Logistics is the management of the flow of resources between the point of origin and the point of destination in order to meet some requirements of customers, for example of customers or corporations. The resources managed in logistics contain physical items such as food, materials, equipment, liquids, and staff and abstract items such as information, particles, and energy. Logistics includes the combination of information, transportation, inventory, warehousing, material handling, and packaging, and occasionally security.

The term logistics comes from the late 19th century: from French *logistique*, from *loger* 'to lodge'. Logistics is considered to have originated in the military's need to supply itself with arms, ammunition, and rations as it moved from base to a forward position. In the ancient Greek, Roman, and Byzantine empires, military officers with the title *Logistikas* were responsible for financial and supply distribution matters

"When in Rome, do as the Romans do" is what has become the milestone to success today. The world has become a global village and hence, the language is playing a vital role in reaching out to the people all around the world. The world is connected through the web; however, it is important to reach out to people's mind and heart and not only to their computers. The easiest yet the most effective way to reach out to people and being heard are by speaking their language.

We are a professional translation and localization company registered in
